

P1 Energy conservation and dissipation revision questions **ANSWERS**

1	What kind of energy store does a moving object have?	Kinetic
2	What kind of energy store does a battery have?	Chemical
3	Give 3 ways in which energy can be transferred	Mechanic work (when a force is moved) , electric current, heating
4	State the law of energy conservation	Energy cannot be created nor destroyed (only transferred)
5	What is the unit of work?	Joule (work is a transfer of energy)
6	When work is done against friction in where does the energy transfer to ?	Thermal store of the two objects experiencing friction
7a	A motor lifts a 2 kg mass through a height of 10m. Calculate the work done by the motor	Force = $mg = 2 \times 10 = 20$ OR Work done = gain in gpe $W = Fd = 20 \times 10 = 200$ J gpe = $mgh = 2 \times 10 \times 10 = 200$ J
7b	In the same time the motor has 250J of electrical energy input to it. Calculate the efficiency of the motor	Efficiency = Useful / input = $200/250 = 0.8$ (x100 = 80%)
7c	What measurement would be needed to calculate the output power of the motor?	Time (Power = Energy / time) or Watts are Joules per second
8	Give 3 ways you could improve the efficiency of an electric motor?	Lubricate, streamline, reduce resistance of wires, lubricate
9	Calculate the energy used by a 12W bulb in 2 minutes	$E = pt = 12 \times 2 \times 60 = 1440$ J
10	Calculate the kinetic energy of a 100g ball thrown at 3 m/s	$KE = 0.5 m v^2 = 0.5 \times 0.1 \times 3^2 = 0.45$ J
11	What would happen to the kinetic energy if the speed were doubled?	(double) ² or 4x bigger = $0.45 \times 4 = 1.8$ J
12	Describe the energy transfers which occur when an object falls from a height (include air resistance)	GPE \rightarrow KE + Heat (+sound) Or energy arrow
13	Ignoring air resistance – what can we say about the kinetic energy gained by a falling object?	KE gained = GPE lost
14	 <p>Mark on the energy types on the picture Sketch a graph of Energy against time, showing 2 different types.</p> 	<p>15 Ignoring air resistance – calculate the speed of the 3kg pendulum bob at the bottom of it's swing if it released from its high point which is 0.25m above the bottom of the swing.</p> <p>KE gained = GPE lost</p> <p>$KE = 0.5 m v^2 = mgh$ (m cancels) so $0.5 v^2 = gh$ $= 0.5 \times 3 \times v^2 = 3 \times 10 \times 0.25$ $v^2 = 7.5/1.5 = 5$ $v = \sqrt{5} = 2.24$ m/s</p>
