## Paper 1 Practice questions (A Level) Answers

| 38 c | The answer can include the following points: <br> Description/explanation of cosmological redshift: <br> - More distant galaxies recede more quickly - whichever direction the observation is made. <br> - This shows (nearly all) galaxies are moving away from each other. <br> - Some observed redshifts cannot be explained by galaxies moving through space. <br> - As light travels from distant galaxies it is stretched as space expands. <br> - The greater the distance, the greater the time of travel, the greater the expansion of space and hence the greater the redshift. <br> - Shows that earlier in time the Universe was smaller. <br> Cosmic microwave background radiation: <br> - Produced when Universe first became cool enough for neutral atoms to form. <br> - Photons travelling from that time will have experienced great cosmological redshifts. <br> - Background radiation nearly uniform. <br> - Near-uniformity shows that the Universe was uniform in its early history. <br> - Small anisotropy (non-uniformity) is observed. <br> - CMBR gives evidence that the Universe was in a hot dense state early in its history. | 6 |
| :---: | :---: | :---: |
| 39 a | Iron is a magnetic material. <br> therefore electrostatic forces can be induced or exerted when a current flows through the coil (or similar answer). | $1$ |
| 39 b | Using thin sheets (laminations) prevents eddy currents in the core that generate an electric field and therefore affect the motion of the magnetic coils. | $\begin{aligned} & \hline 1 \\ & 1 \\ & 1 \\ & \hline \end{aligned}$ |
| 39 c | Any sensible suggestions, e.g.: <br> - Increase the number of turns on the (rotor) coil to generate a greater <br> magnetic force for a given current. <br> - Increase the diameter of the (rotor) coil to increase the magnetic flux <br> linkage through the coil (and hence the force). <br> - Use a different rotor core (with greater magnetic permeability) to increase the force for a given magnetic flux linkage. | Maximum 4 marks (2 for modifications and 2 for explanations) |
