Rise and Fall of the Clockwork Universe

## Mark Scheme for June 2010

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of pupils of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, OCR Nationals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by Examiners. It does not indicate the details of the discussions which took place at an Examiners' meeting before marking commenced.

All Examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the Report on the Examination.

OCR will not enter into any discussion or correspondence in connection with this mark scheme.

| Question | expected answer | mark | Additional guidance |
| :---: | :---: | :---: | :---: |
| 1a <br> 1b | $\mathrm{Nkg}^{-1}$ <br> $\mathrm{Jkg}^{-1} \mathrm{~K}^{-1}$ | 1 <br> 1 |  |
| 2a <br> 2b | $E=0.5 C V^{2}=1.2(15) \times 10^{-3} \mathrm{~J}$ <br> (current is) flow of charge (off capacitor, through circuit); <br> EITHER <br> p.d. across capacitor/resistor decreases (as capacitor loses charge) <br> OR <br> rate of charge release proportional to charge (on capacitor) | 1 <br> 1 | ignore anything more than two sig. figs e.g $1.21 \times 10^{-3}$ for [1] <br> ignore references to discharging <br> not just charge on capacitor decreases <br> accept electrons as charge <br> accept $/=Q / t$ or wtte for [1] |
| $3 a$ <br> 3b <br> 3c | $\begin{aligned} & D=\frac{N m}{V}=\left(\frac{3 p}{\overline{c^{2}}}\right) \\ & \sqrt{\overline{c^{2}}}=\sqrt{\frac{3 p}{D}}=500 \mathrm{~m} \mathrm{~s}^{-1} \end{aligned}$ <br> gas particles change direction; because they collide (with other particles); | 1 <br> 1 <br> 1 1 | look for $D=N m / V$ <br> $N=1$ earns [0] <br> ignore references to random ignore description of random walk |
| $4 a$ $4 b$ | $\begin{aligned} & N=\frac{A}{\lambda}=\frac{1.6 \times 10^{5}}{7.6 \times 10^{-10}}=2.1 \times 10^{14} \\ & A=A_{0} \mathrm{e}^{-\lambda t}=4.7 \times 10^{4} \mathrm{~Bq} \end{aligned}$ | $1$ | $N=2.11 \times 10^{14}$ gives $4.75 \times 10^{4} \mathrm{~Bq}$ for [1] ignore sign of answer |

\begin{tabular}{|c|c|c|c|}
\hline G494 \& \multicolumn{3}{|r|}{Mark Scheme} \\
\hline 5 \& \begin{tabular}{l}
EITHER \\
C and D OR \\
\(D\) and \(C\)
\end{tabular} \& 2 \& each correct response for [1] remember Don't Care \\
\hline \(6 a\)
\[
6 b
\] \& \[
\begin{aligned}
\& N=\frac{p V}{k T}=3.1 \times 10^{24} \\
\& N k T=1.2 \times 10^{4} \mathrm{~J}
\end{aligned}
\] \& 1

1 \& | look for at least two sig. figs in their answer, rounding to $3.1 \times 10^{24}$ |
| :--- |
| accept correct reverse calculation |
| $3 N k T / 2$ gives $1.8 \times 10^{4} \mathrm{~J}$ for [1] |
| $5 \mathrm{NkT} / 2$ gives $2.9 \times 10^{4} \mathrm{~J}$ or $3.0 \times 10^{4} \mathrm{~J}$ for [1] | <br>

\hline 7 \&  \& 1 \& correct pattern for [1] <br>

\hline 8 \& |  |
| :--- |
|  |
|  |
|  |
|  | \& \[

$$
\begin{aligned}
& 1 \\
& 1
\end{aligned}
$$

\] \& | correct pattern for [2] |
| :--- |
| one mistake for [1] |
| a mistake is an extra tick, a missing tick or a tick in the wrong place | <br>

\hline 9 \& \[
$$
\begin{aligned}
& \text { A } \\
& \text { C } \\
& \text { D }
\end{aligned}
$$

\] \& 2 \& | only one mistake for [1] |
| :--- |
| remember All Can Do | <br>

\hline
\end{tabular}

| 10a | particles bounce off ground; momentum of particles/ground changes; <br> EITHER <br> force on ground is its rate of change of momentum <br> OR <br> momentum change of particle requires a force, so equal and opposite force on the ground | 1 1 1 | accept collide/hit <br> QWC mark - must use correct terms for third marking point |
| :---: | :---: | :---: | :---: |
| 10bi | $p=(N / V) C$ where $C=k T=$ constant | 1 |  |
| 10bii | probability of a particle at $h$ is $e^{-\frac{\varepsilon}{k T}}$; where $\varepsilon=m g h$ is gravitational/potential energy of particle; | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | accept fraction/proportion for probablility accept GPE |
| 10biii | $7.9 \times 10^{4} \mathrm{~Pa}$ | 1 | accept more than 2 sig. fig. |

| 10c | EITHER |
| :--- | :--- |
|  | more energy in system |
| so more particles get lucky and able to |  |
| reach that height |  |
|  | OR |
|  | $T=$ some value above 290 K |
|  | (b)(iii) correctly recalculated |
|  | OR |
| increased KE/speed/velocity of particles |  |
| increased collision rate |  |
|  | OR |
| increased momentum of particles |  |
| increased momentum change per collision |  |
|  | OR |
|  | $k T$ increases |
|  | so $e^{-\frac{E}{k T}} / \mathrm{BF} / e^{-\frac{m g n}{k T}}$ increases |

[^0]| 11ai | all lines at $45^{\circ}$ <br> from $(0,0)$ changes direction at $(?, 4)$ and ends at $(0,8)$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | accept lines drawn freehand |
| :---: | :---: | :---: | :---: |
| 11aii | time out = time back <br> because speed of light is constant | 1 1 | accept one-way time is half total time ignore references to distance accept pulse travels at speed of light |
| 11aiii | $s=3.00 \times 10^{8} \times 4.00=1.20 \times 10^{9} \mathrm{~m}$ | 1 | accept $1.2 \times 10^{9} \mathrm{~m}$ |
| 11bi | pulse-echo time is now 7.34 s less than before, (so reduced distance) | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | accept pulse-echo time is reduced by 0.66 s for [2] accept calculation of new distance of $1.1 \times 10^{9} \mathrm{~m}$ for [2] |
| 11bii | $\begin{aligned} & s \text { at } 950 \mathrm{~s} \text { is } 1.10 \times 10^{9} \mathrm{~m} \\ & (1.20-1.10) \times 10^{9} / 946=1.1 \times 10^{5} \mathrm{~m} \mathrm{~s}^{-1} \end{aligned}$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | allow ecf from incorrect bi and aiii accept 1 .(0) $\times 10^{5} \mathrm{~m} \mathrm{~s}^{-1}$ <br> allow ecf incorrect new distance to asteroid for [1] |
| 11c | (measure) change of wavelength $\Delta \lambda$ apply $z=\Delta \lambda / \lambda=v / c$ | 1 1 | accept increase or decrease of wavelength accept measure the red/blue shift for [1] |

| 494 |  |  | Mark Scheme |
| :---: | :---: | :---: | :---: |
| 12ai | Sound energy produced (at expense of kinetic energy). | 1 |  |
| 12aii | $\Delta p=2.0 \times(5+3.3)=16.6 \mathrm{Ns}$ for hammer $p=16.6$ Ns for mass $v=16.6 / 10=1.7 \mathrm{~m} \mathrm{~s}^{-1}$ | $\begin{aligned} & 1 \\ & 1 \\ & 1 \end{aligned}$ | ```look for attempt at momentum conservation [1] correct substitution for [1] evaluation for [1] so 0.34 m s-1 for [2]``` |
| 12b | correct shape and period correct phase | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | over the whole time span, any constant amplitude |
| 12ci | $a=-50 \times 0.21=-10.5 \mathrm{~m} \mathrm{~s}^{-2}$ | 1 | allow ecf from one step to the next |
|  | $v=0.85-10.5 \times 0.05=0.325 \mathrm{~m} \mathrm{~s}^{-1}$ | 1 |  |
|  | average speed $=0.5875 \mathrm{~m} \mathrm{~s}^{-1}$ $x=0.21+0.59 \times 0.05=0.24$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ | accept correct use of $s=u t+a t^{2} / 2$ for full marks |
| 12cii | (do two or more successive calculations) for shorter time intervals | 1 |  |

| 13a | [1] for each correct arrow | 2 | mark the direction of the arrow if it doesn't pass through the comet |
| :---: | :---: | :---: | :---: |
| 13bi | $\begin{aligned} & E_{\mathrm{k}}=1 / 2 m v^{2} \text { so } E_{\mathrm{k}} / m=v^{2} / 2 \\ & E_{\mathrm{k}} / m=\left(54.6 \times 10^{3}\right)^{2} / 2=1.49 \times 10^{9} \mathrm{~J} \mathrm{~kg}^{-1} \end{aligned}$ | $\begin{aligned} & 1 \\ & 1 \end{aligned}$ |  |
| 13bii | $\begin{aligned} & E_{g}=-\frac{G M m}{r} \text { so } \frac{E_{g}}{m}=-\frac{G M}{r}\left(=V_{g}\right) \\ & =-6.67 \times 10^{-11} \times 2.00 \times 10^{30} / 8.82 \times 10^{10} \\ & =-1.5(1) \times 10^{9} \mathrm{Jkg}^{-1} \\ & E_{\mathrm{t}}=E_{\mathrm{g}}+E_{\mathrm{k}}=\left(-2 \times 10^{7} \mathrm{~J} \mathrm{~kg}^{-1}\right) \end{aligned}$ | 1 1 | ignore calculation of total energy, but accept $-1.2 \times 10^{7} \mathrm{~J} \mathrm{~kg}^{-1}$ |
| 13biii | $\begin{aligned} & E_{g}=-2.5 \times 10^{7} \mathrm{~J} \mathrm{~kg}^{-1} \\ & E_{\mathrm{k}}=-2.0 \times 10^{7}-\left(-2.52 \times 10^{7}\right)=5.2 \times 10^{6} \mathrm{~J} \mathrm{~kg}^{-1} \\ & \text { so } v=\sqrt{2 \times 5.2 \times 10^{6}}=3.2 \times 10^{3} \mathrm{~m} \mathrm{~s}^{-1} \end{aligned}$ | 1 1 1 1 | calculate new value for $E_{g}$ using -GM/r for [1] ecf: calculate new $E_{k}$ by $E_{\mathrm{t}}-E_{\mathrm{g}}$ for [1] ecf: calculate $v$ from $E_{k}$ for [1] <br> accept $2.3 \times 10^{3} \mathrm{~m} \mathrm{~s}^{-1}$ for [3] |
